DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 12/12/2005 has been entered. Claims 2, 3, 5, 6, 7, 15, 20-23, 25, 26, 29, and 31 are pending.

REASONS FOR ALLOWANCE

2. The following is an examiner's statement of reasons for allowance:
- With regard to independent claim 26, as the closest reference on record, Soeno et al (US 6,246,552) shows a disc drive actuation system for precisely positioning a read/write head over a selected track of a rotatable disc the system including: a flexure; a slider; and a microactuator, which includes: an inner inactive region, a first outer inactive region, a second outer inactive region, a first piezoelectric section, and a second piezoelectric section; wherein the first and second outer inactive regions are connected to the flexure and the inner inactive region is connected to the slider; **but fails to show** that the first and second outer inactive regions are connected to the slider and the inner inactive region is connected to the flexure.

- With regard to independent claims 15 and 29, as the closest reference on record, Soeno et al (US 6,246,552) shows a disc drive actuation system for precisely positioning a read/write head over a selected track of a rotatable disc the system including: a flexure; a slider; and a microactuator, which includes: an inner inactive region, a first outer inactive region, a second outer inactive region, a first piezoelectric section, and a second piezoelectric section; wherein the first and second outer inactive regions are connected to the flexure and the inner inactive region is connected to the slider; **but fails to show** that the microactuator is not interrupted by break or opening.
- Applicant assumes that in his device, the microactuator has to only overcome the inertial mass of the slider and a portion of its own mass, very precise control at high frequency is possible (Specification, p. 3, lines 15-17).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tianjie Chen whose telephone number is 571-272-7570. The examiner can normally be reached on 8:00-4:30, Mon-Fri.
